Cargo Lifts

GalaxyLifts.com  888.317.7203
Galaxy Unlimited, LLC has earned a strong reputation for exceeding industry safety standards and ensuring quality, durability, and technological efficiency for each and every cargo lift sold. Our products are backed by the best cargo lift warranty in the industry and our installation is second to none.

At Galaxy Unlimited we make customer service our number one priority, taking steps to develop unique solutions for every customer’s particular needs.

Our staff of certified and highly trained professionals are ready to assist you with any questions you may have. Give us a call and let us tell you how easy it is to get started with one of the best investments you could ever make.

Galaxy Lifts is superb, downright fantastic and their customer service is great with quick service. Galaxy has gone above and beyond.
—Regan, MS

Need a Lift?

Is the inconvenience of lugging groceries and luggage up and down stairs ruining the relaxing experience of your beach or mountain home? Or maybe your business is limited by its capability to readily and economically move heavy and oversized product between floors.

Galaxy Lifts are engineered with welded aluminum construction and stainless steel hardware, giving you up to a 1,000 pound capacity, a 27 ft. maximum height and 14 ft. per minute lift speed.

You can rest assured that moving your personal or professional possessions is done safely and with ease.

MADE IN THE USA

ALL LIFTS ARE METICULOUSLY CUSTOM DESIGNED AND CONSTRUCTED UNDER THE STRICTEST GUIDELINES IN THE USA AT OUR FACILITY IN MABANK, TEXAS.
Galaxy Cargo Lifts are Available in Four Models!

**VOYAGER II**

Galaxy Lift, LLC’s bullet-proof and proven cargo lift, the Voyager II, was our first model and continues to be a sought after solution for many installations. The Voyager II comes standard with 4” I-beams and is suggested for travel heights less than 17 feet. The Voyager II often meets the needs of homeowners ready for the safety and convenience of a lift. Custom add-ons and options can result in a lift that meets your every requirement.

**VOYAGER II PREMIUM**

Galaxy has taken the Voyager II to the next level with our Premium model. Designed and engineered to travel up to 27 feet, the Voyager II Premium comes standard with 5” I-beams for added rigidity and our SDS® braking system, a safety add-on for higher travel heights.

**ORION**

Galaxy’s newest and largest cargo lift, the Orion, comes standard with three 5” I-beams allowing it to accommodate up to a 1,200 lbs. capacity. This versatile lift is available from 87.5” up to a 110” wide, making it ideal utilized in industrial settings to move heavy loads between floors.

The Orion can also be used as a motorcycle lift, as seen on the Discovery Channel’s “Garage Rehab” hosted by Richard Rawlings.

**SMART-SHUTTLE™**

The Smart-Shuttle™ is an innovative Do-It-Yourself (DIY) Lift. The Smart-Shuttle is designed for applications where a larger basket model would not fit. This economical choice may be ordered on Amazon and the smaller basket size is shipped with ease. This model comes standard with our composite flooring and a complete DIY kit with installation manual. Galaxy’s online technical assistance is also available.
More Than Just a Cargo Lift. . .
WE OFFER SAFETY, SECURITY AND THE SPECIFICATIONS YOU NEED.

SIDE BRACE

Our side brace is our most common application, fitting 90% of all lift applications. This allows the travel beams to be perpendicular to the structure and also allows for two gate openings on the basket—one on the structure side and an optional second gate opening on one of the other two available sides of the basket.

NOTE: Gate opening on the ‘back side’ (or the ‘travel beam’ side) of basket is not an available option.

VERTICAL BRACE

Galaxy’s second most commonly used brace is our vertical brace. This brace allows the travel beams to be flush against a structure. This brace is often used in an interior shaft application or when the lift/basket needs to travel through the structure/deck.
ARROWHEAD BRACE

Galaxy’s arrowhead brace allows yet another option on our custom designed lifts. This brace adds additional support and safety when the lift needs to be flush with the end of the structure, assuring a fully supported installation.

The Correct Bracing Adds Stability and Safety to Your Lift

HORSESHOE BRACE

The horseshoe brace, though not as common, is used when structures only allow for one opening, and available space only allows for the travel beams to be parallel to structure. Just one more example of our commitment to our customer to meet every cargo lift need.
Galaxy Has the Perfect Gate Option for Your Lift!

**36” GATE**
Always striving to meet customer’s unique installation needs, Galaxy offers a smaller 36” gate where size limitations require an opening narrower than the lift basket. This application is also used on our dual gate pass-through units to reduce flexing of the basket.

**RAMP GATE**
The ramp gate lowers to double as a convenient way to roll items on and off the lift. Ideal for sites that use a dolly to move heavy items. Includes a latch to hold the gate in place when in the closed position.

**SALOON STYLE GATE**
The saloon style gate is another option. This gate opens from the middle or one or the two gates can remain closed with a latch that locks to the floor of the lift. Perfect for spaces with limited clearance for doors.

**DECK GATE**
The deck gate is attached where the basket meets the porch on the upper level. This is made out of the same aluminum used for the basket. The deck gate comes in two installation options:

- **GATE ONLY** with customer providing the posts to attach the gate to.
- **DECK GATE KIT** which includes the posts the gate connects to. Shown above right; the deck gate (powder coated black) with posts.

**DECK GATE LOCK/INTERLOCK**
The interlock is a safety lock for the Deck Gate. This ensures the Deck Gate will not open until the basket is in place or at a level location. This added safety option eliminates the potential of a fall from leaning on an unsecured gate.

**LOW PROFILE GATE**
The low profile gate eliminates the gap between the base of the unit and the bottom of the gate. Shown left; low profile gate powder coated white and featuring the stained glass inset.

**Our Engineering Staff Can Overcome Any Installation and Design Challenge**
CALL/SEND STATION
An optional call/send station acts as an ‘elevator’ button and allows the lift to be sent to another floor or called to a particular floor. This can be placed at any floor but is typically installed on upper floors.

MOUNTED LIFT CONTROL
This mounted lift control option is placed on the corner post of the basket facing out. The mounted lift control provides added convenience by eliminating the customer from fumbling around for their remote or walking over to the control box. This is an all-weather proof item.

The Galaxy cargo lift comes standard with a hand held control and a control box to control the mechanism. Lifts with an up/down or a 2-stop (ground to deck) control system come standard with our UP/DOWN REMOTE. Lifts with the 3-stop unit (ground, 2nd and 3rd level) come standard with the 3 STOP REMOTE. Customer can choose between any combination on the 3-stop remote. For example, if lift is on ground level, they can push the 3 button on the remote and bypass level 2. The lift does not have to stop at the middle level.

Options To Make Your Galaxy Lift Even More Convenient!

FOLD DOWN SHELF
The fold down shelf locks into place and can hold over 200 lbs. You can place items that are smaller and need be easily accessible. This shelf also folds down for easy put-away providing full capacity of the basket.

HANDRAILS
Handrails featuring strong, solid construction may be added to any lift model and provide both comfort and safety.

Galaxy cargo lifts come standard with one gate opening location on the basket (customers choice of which side). The customer has a choice to add another gate opening on the basket. Shown; Our most popular second gate option, the PASS THROUGH, with openings opposite of one another allowing for items to be brought in on one side and exiting the opposite side on the 2nd level. However customers can choose to have the second gate on one of the two other available sides. A gate opening on the ‘travel beam’ side of basket is not an available option.
Safety is Our Number One Priority!

**ALL GALAXY LIFT MODELS** come standard with the most extensive safety features in the industry. The safety options listed here may be added to models that do not come standard with them.

**SDS BRAKING SYSTEM**

Galaxy uses the safest braking in the industry on all of our lift models, but the optional SDS Braking system is designed to stop the lift within 1” on the rare chance one or both cables were to become slack or break. The SDS comes standard on the Voyager II Premium but may be added to any Galaxy lift model.

**PAN SWITCH**

The pan switch may be added to the bottom of the basket with a piece of lexan glass (not shown) and will stop the down motion if something is under the moving basket such as a trash can, similar to the sensor on garage doors.

As part of our standard, we use a 90:1 ratio gearbox which has a built in feature which will lock the lift in place until it has power. This is to ensure the lift will not ‘fall’ or move when in the up position.

**GEARBOX WHEEL**

Galaxy’s Action Control Wheel System (ACWS©) is designed to manually position the lift up or down in the event of an emergency or power-outage. This optional gearbox wheel is easily attached directly to the gearbox.

**THE STANDARD FOR A GALAXY LIFT** is to have two (2) stainless steel aircraft strength cables. Each individual cable is designed to withstand a load of up to 6,400 lbs. without breaking. Industry standard suggests that this type of cable can be safely subjected to a working load of up to twenty percent of this value, or 1,280 lbs. Each cable can withstand 1,280 lbs. with repetitive use and a one-time lift of 6,400 lbs. without fear of breaking. Our cables alone provide more than double the capacity rating, ensuring the safety of our lifts. A larger winder and cover may be added for needed height and safety.

**LARGE WINDER**

The winder in our head assembly determines how high a lift model can travel. Our smaller winders have the capacity to travel from ground to a maximum deck height of 17’. Our optional arger winder (which has a larger diameter) allows the basket to travel up to 27’ from ground to deck.

**WINDER COVER**

The winder cover is a protective housing over the head assembly. This prevents the possibility of items getting caught in the winder and provides a more finished look to the winder assembly.
Customize Your Cargo Lift!

Galaxy’s Lifts Can Be Customized to Enhance Your Site’s existing Architecture and Setting.

**POWDER COAT FINISH**

Whether a mountain chalet, beach house or industrial site we can powder coat your new lift with a durable finish that will protect it as well as blend or contrast seamlessly with your structure. Select from an extensive choice of powder coat paint colors including hammered finishes.

**STAINED GLASS**

The stunning stained glass insert (for decorative use only) is handcrafted by a local Texas artisan. This option may be added to any gate style except the saloon style gate.

**CANOPY COVERS**

The canopy protects the basket from sun, rain and snow. The canopy allows for a 6’ 9” clearance from gate entry to bottom of the canopy. Meticulously constructed to exact specifications, the canopy is available in literally hundreds of colors and patterns to complement your lift and structure’s style and color. The flat plexiglass canopy shown above is available when the fascia limits room for the standard canopy.

**EXTENDED THRESHOLD**

The extended threshold is an added piece bolted to the opening side of the basket gate to reduce the gap between the deck and the basket.

**LEXAN SIDES**

Lexan siding gives the basket and gate a solid surface. This great looking basket option also has the added advantage of preventing small items from rolling under the bottom rail while moving.

**COMPOSITE FLOORING**

Weatherproof composite flooring has gained more and more popularity for decks and piers and makes a beautiful, durable and easy to care for flooring for your lift. Available in six finishes.
THE BEST CARGO LIFT WARRANTY IN THE INDUSTRY

- 5-Year Structural Warranty
- 1-Year Warranty on the Electrical and Mechanical Parts
- Replacement Parts Delivered to You Within 7 Days
- Tech Support Always Readily Available

MUST REGISTER WITHIN 30 DAYS OF INSTALLATION TO ACTIVATE WARRANTY

Our First and Foremost Priority is Your Safety and Satisfaction

Galaxy Lifts, LLC employs a team of professionals to assure your lift is the safest possible design for your installation site. All the while keeping satisfaction with design, price and service after the sale in mind.

Our sales professionals have years of experience in the industry and make your custom lift design and installation requirements their highest priority. Our engineers assure our lifts exceed industry standards in addition to being user friendly. All welders are required to have an associate degree of applied science in welding or be certified in welding from an accredited college. A quality control department scrutinizes every product before it leaves our factory.

Our company is large and innovative enough to meet your every need, yet small enough to retain a family oriented pride and ownership over every job that goes through our manufacturing facility. This along with the broadest assortment of products available in the marketplace, and the best service record and warranty, combine to make Galaxy Lifts a natural choice for your lift needs.
This is to tell everyone who is looking for a cargo unit for their home or business, Galaxy Unlimited is the only way to go. Very knowledgeable and professional service.
